

# WHY ARE UFAD SYSTEMS SO DARN EFFICIENT?

*Making Mass Timber Buildings Even Better*

A modern office interior with large windows, wooden pillars, and white desks. A person is visible working at a desk in the background. The ceiling features exposed wooden beams and modern lighting fixtures. The floor is made of large, light-colored tiles.

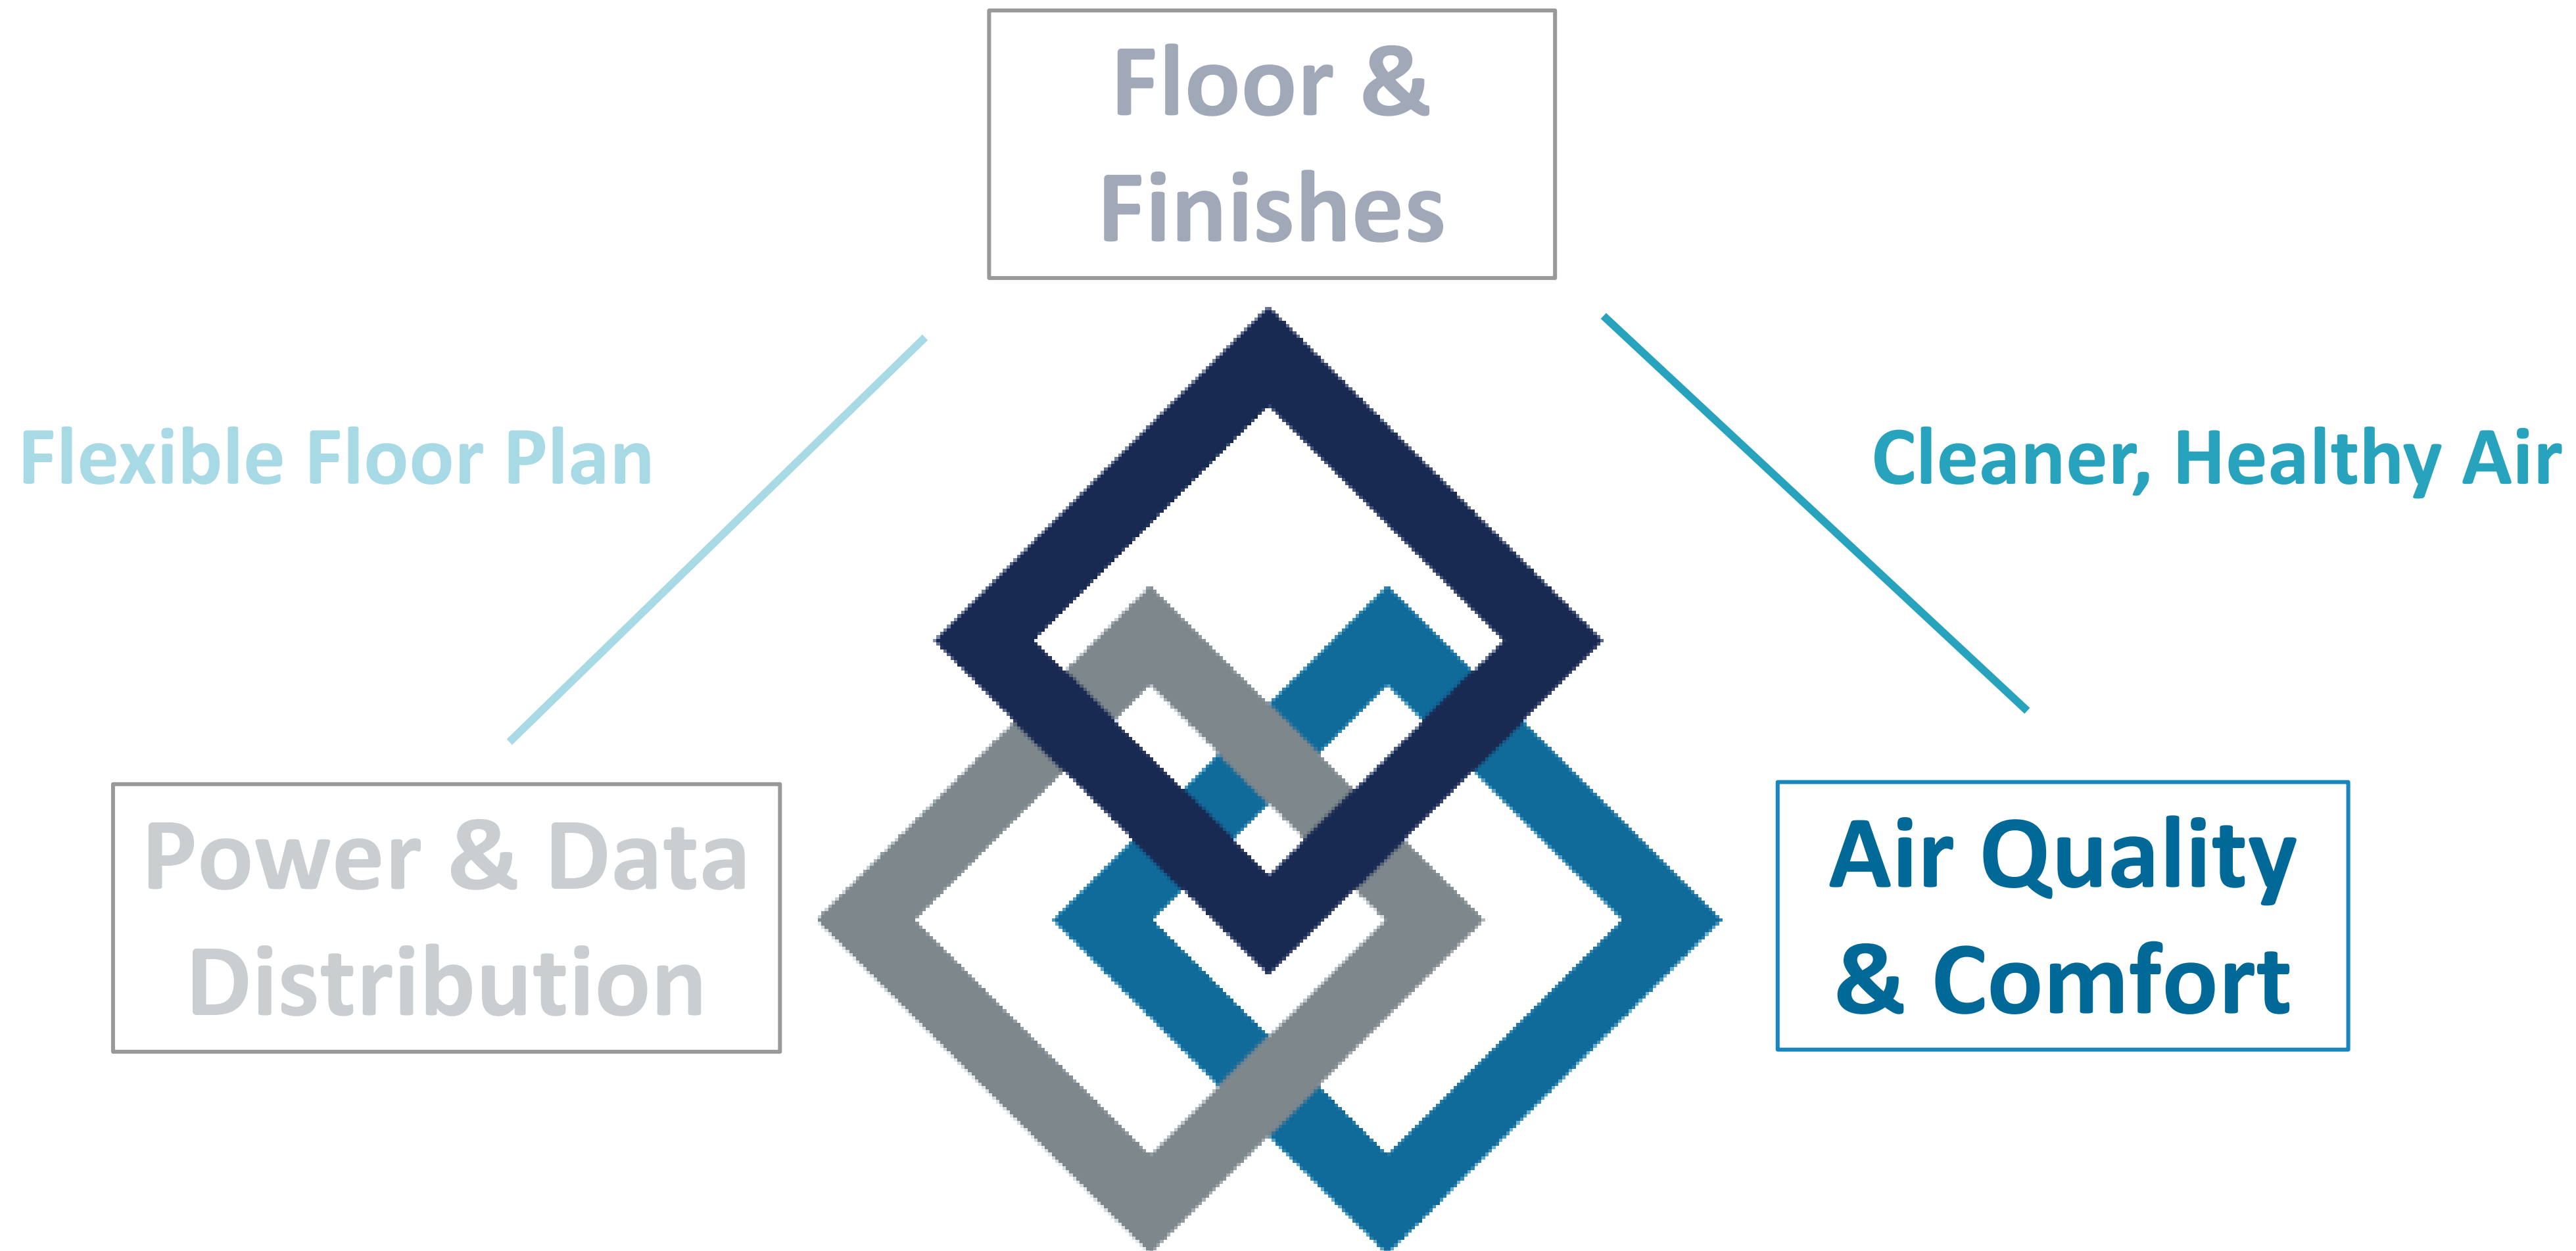

## Our Other Superpower: Saving Energy

**Global Integrated Flooring Solutions®** are custom tailored to meet and adapt to your changing needs – combining industry-leading and field-proven raised access flooring with underfloor air distribution (UFAD), plug & play power systems, hidden WiFi and unique finishes that create an environment that is beautiful, highly adaptable and optimized for your client.

**Global UFAD & MPD Systems** are designed to be especially easy to manage. Our low-profile underfloor air design is especially energy efficient and flexible. Virtually any base mechanical system can be design to front an air tower based UFAD approach. Our engineers are happy to engage with the project team to provide expert advice on sizing, placement and selection.
